INTRODUCTION

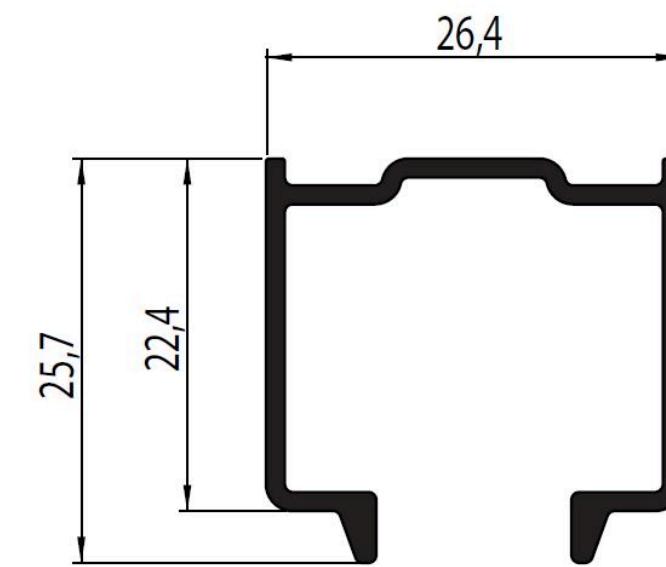

The folding shutter system is designed to offer smooth, space-saving operation for modern closet applications. Its mechanism ensures stable movement and full accessibility without compromising the overall aesthetic. The system can be configured to suit various design requirements and installation conditions. It is fully compatible with both wooden and aluminum shutters.

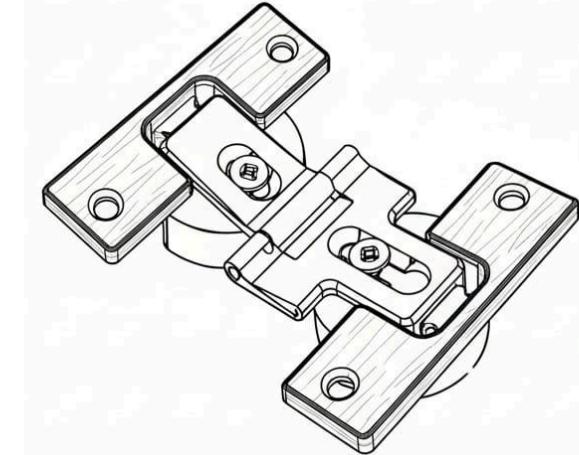

MATERIALS & TOOLS

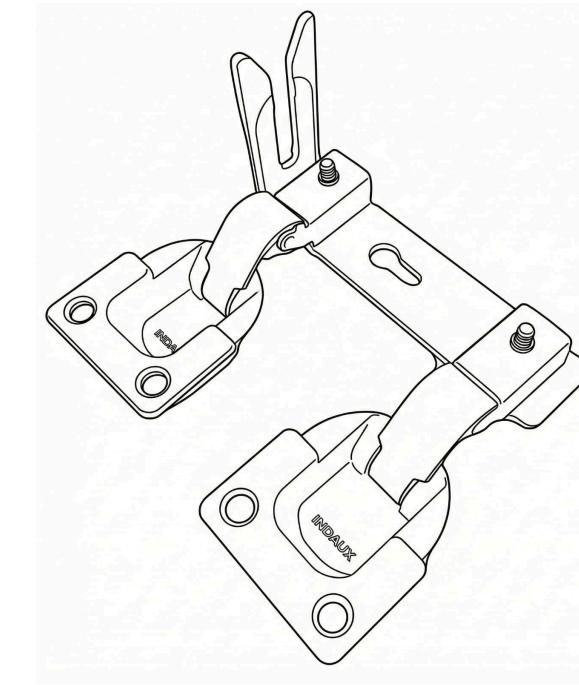

Main Components

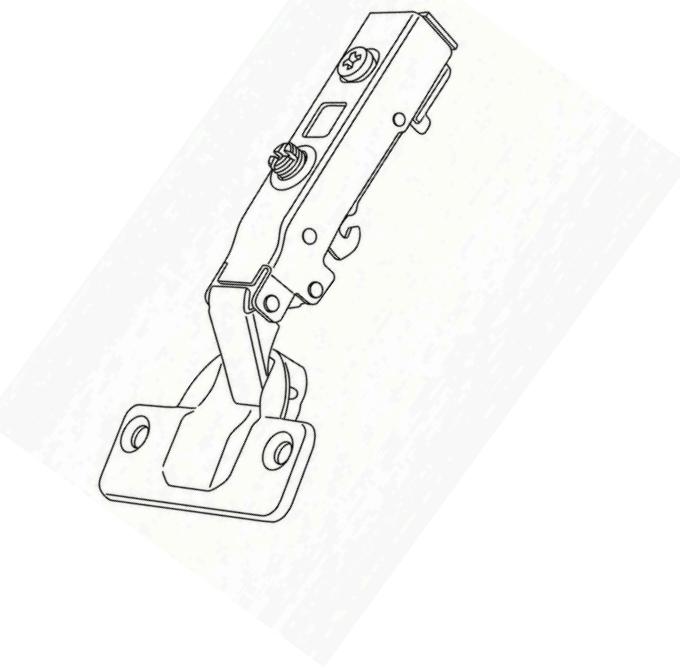

• Track Profile

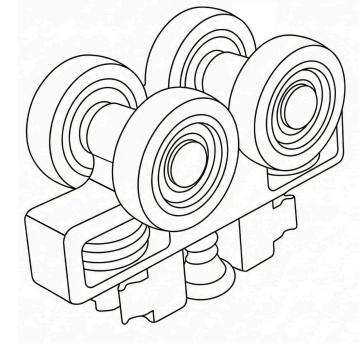

• Center Hinge

• Corner Hinge

• Hinge

• Roller

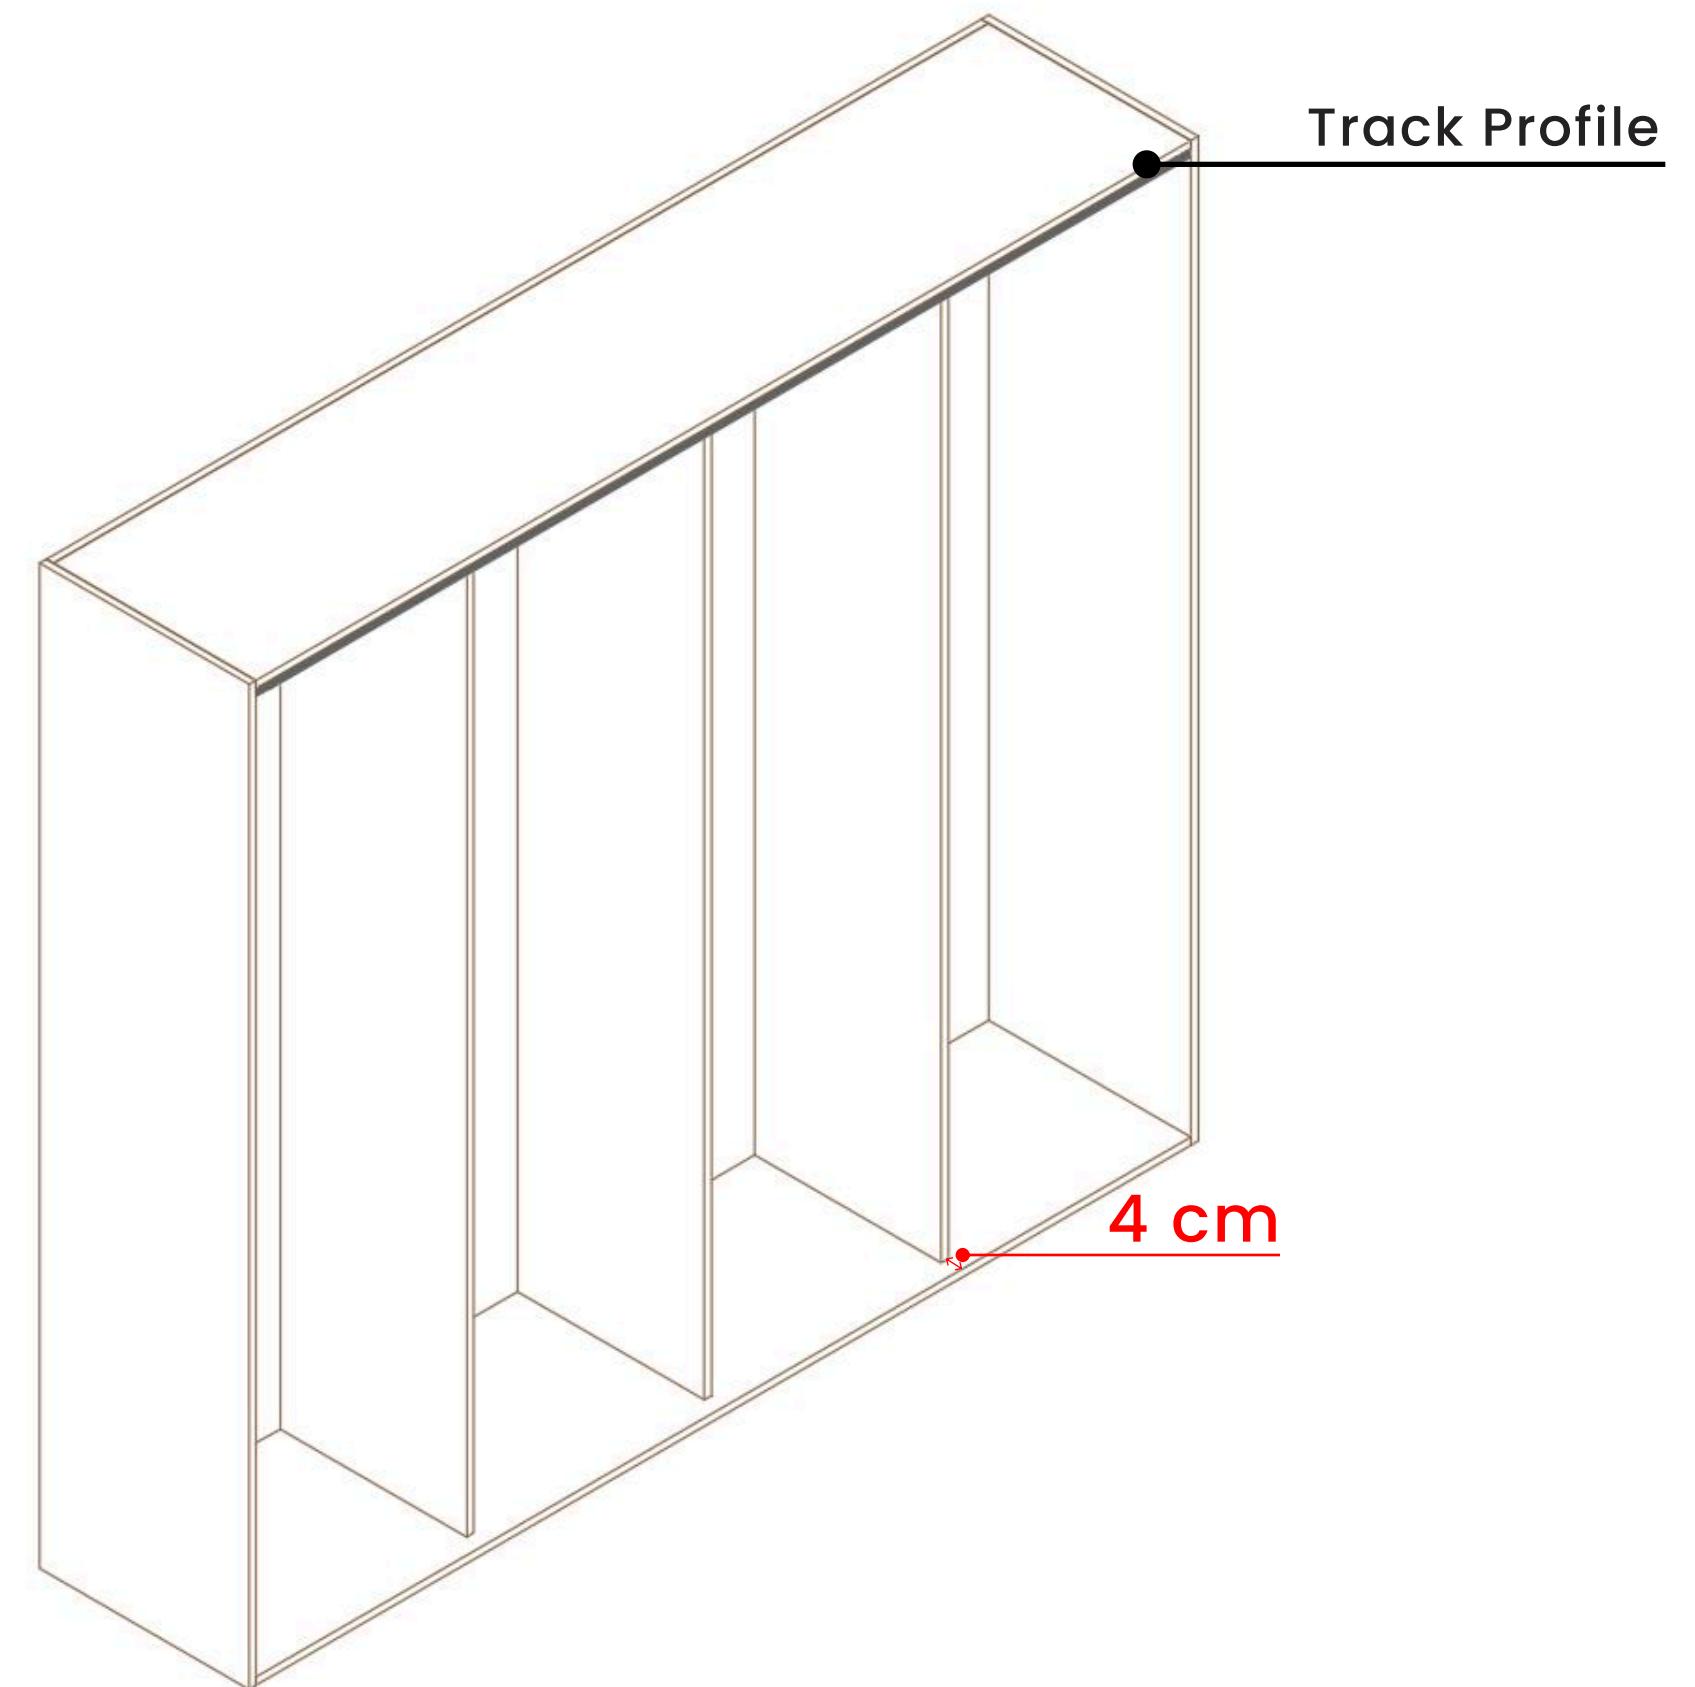

TRACK INSTALLATION

Track and Roller fixing

- Plan view of the closet with the overhead sliding track system installed.
- Isometric view detailing the closet and the upper track, highlighting the 4 cm internal panel depth.

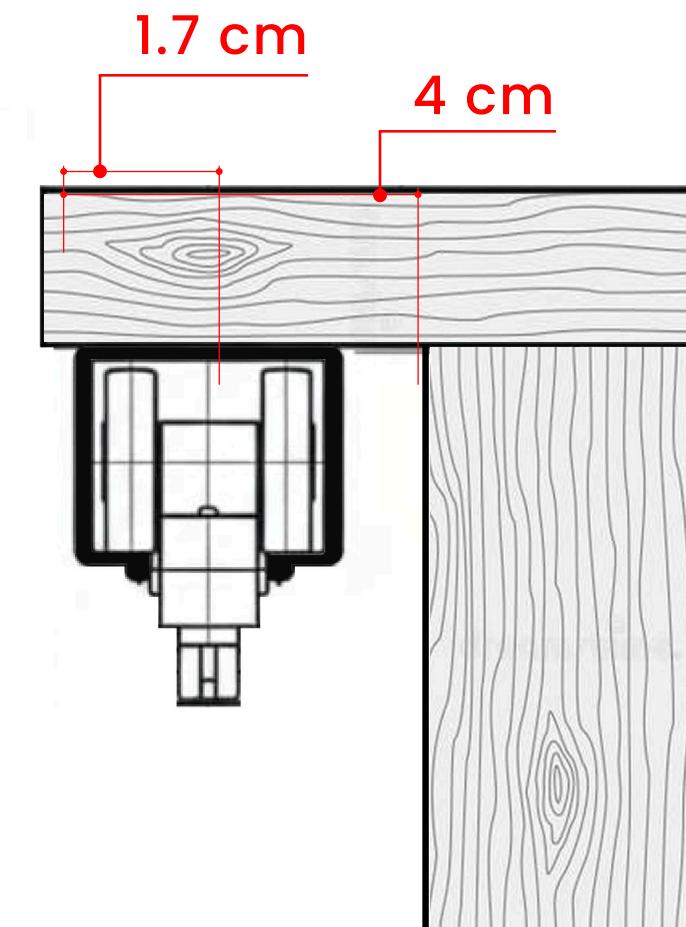

Plan View

Isometric view

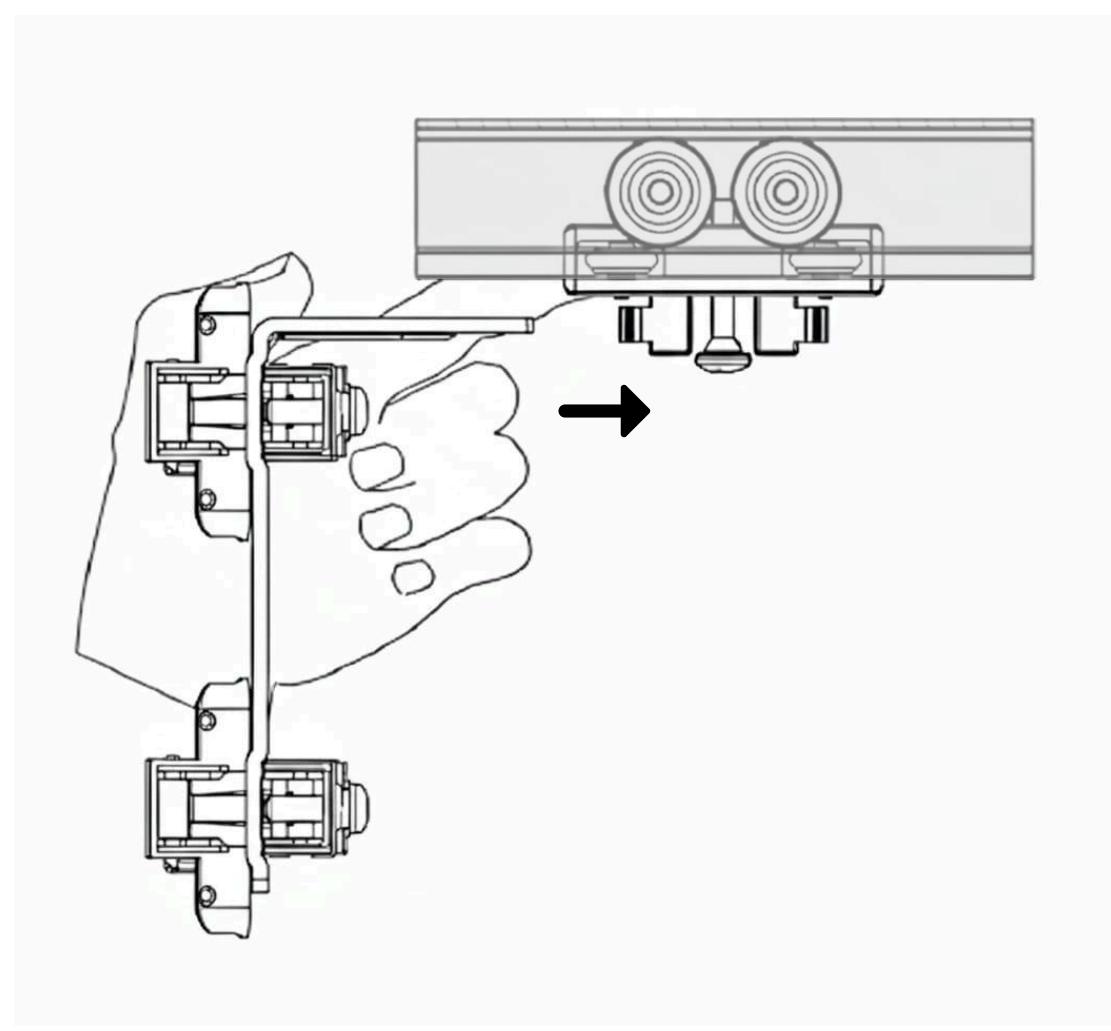

HINGE INSTALLATION

Hinge Positioning & Assembly

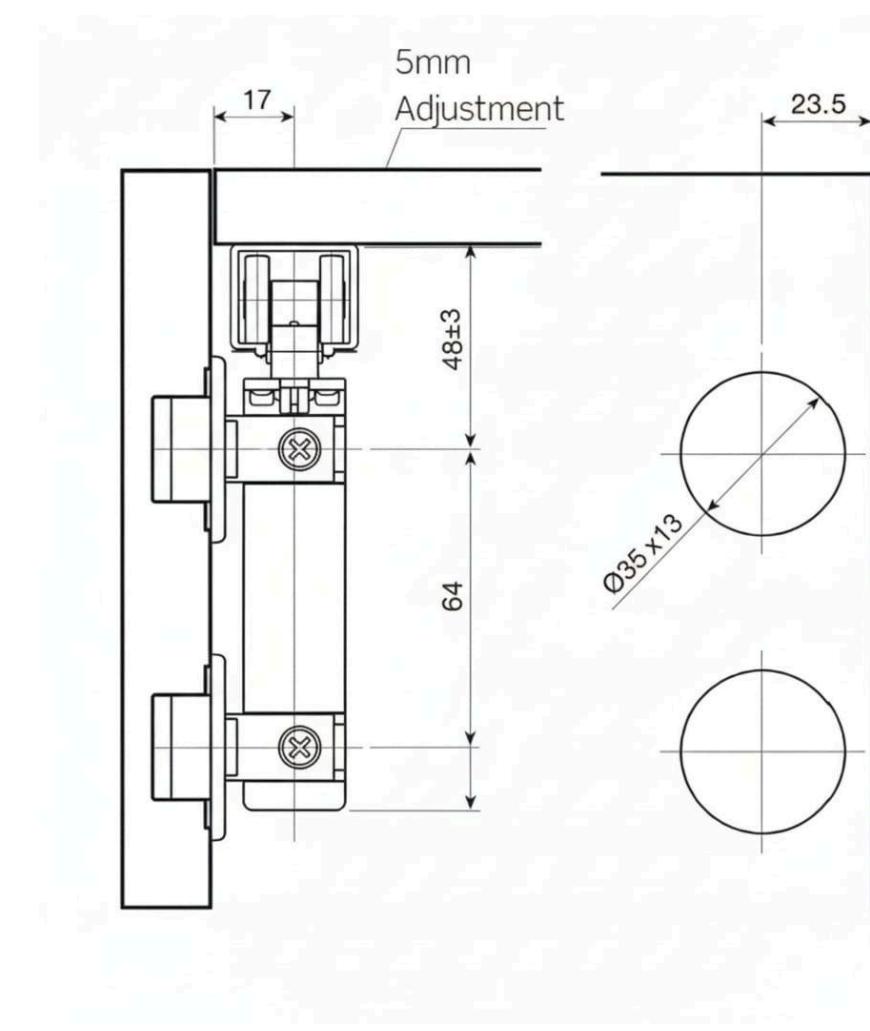

Side view

Side view shows the roller smoothly positioned inside the track within the wooden cabinet.

Front view

Front view shows the upper track and roller, detailing the Corner Hinge Assembly.

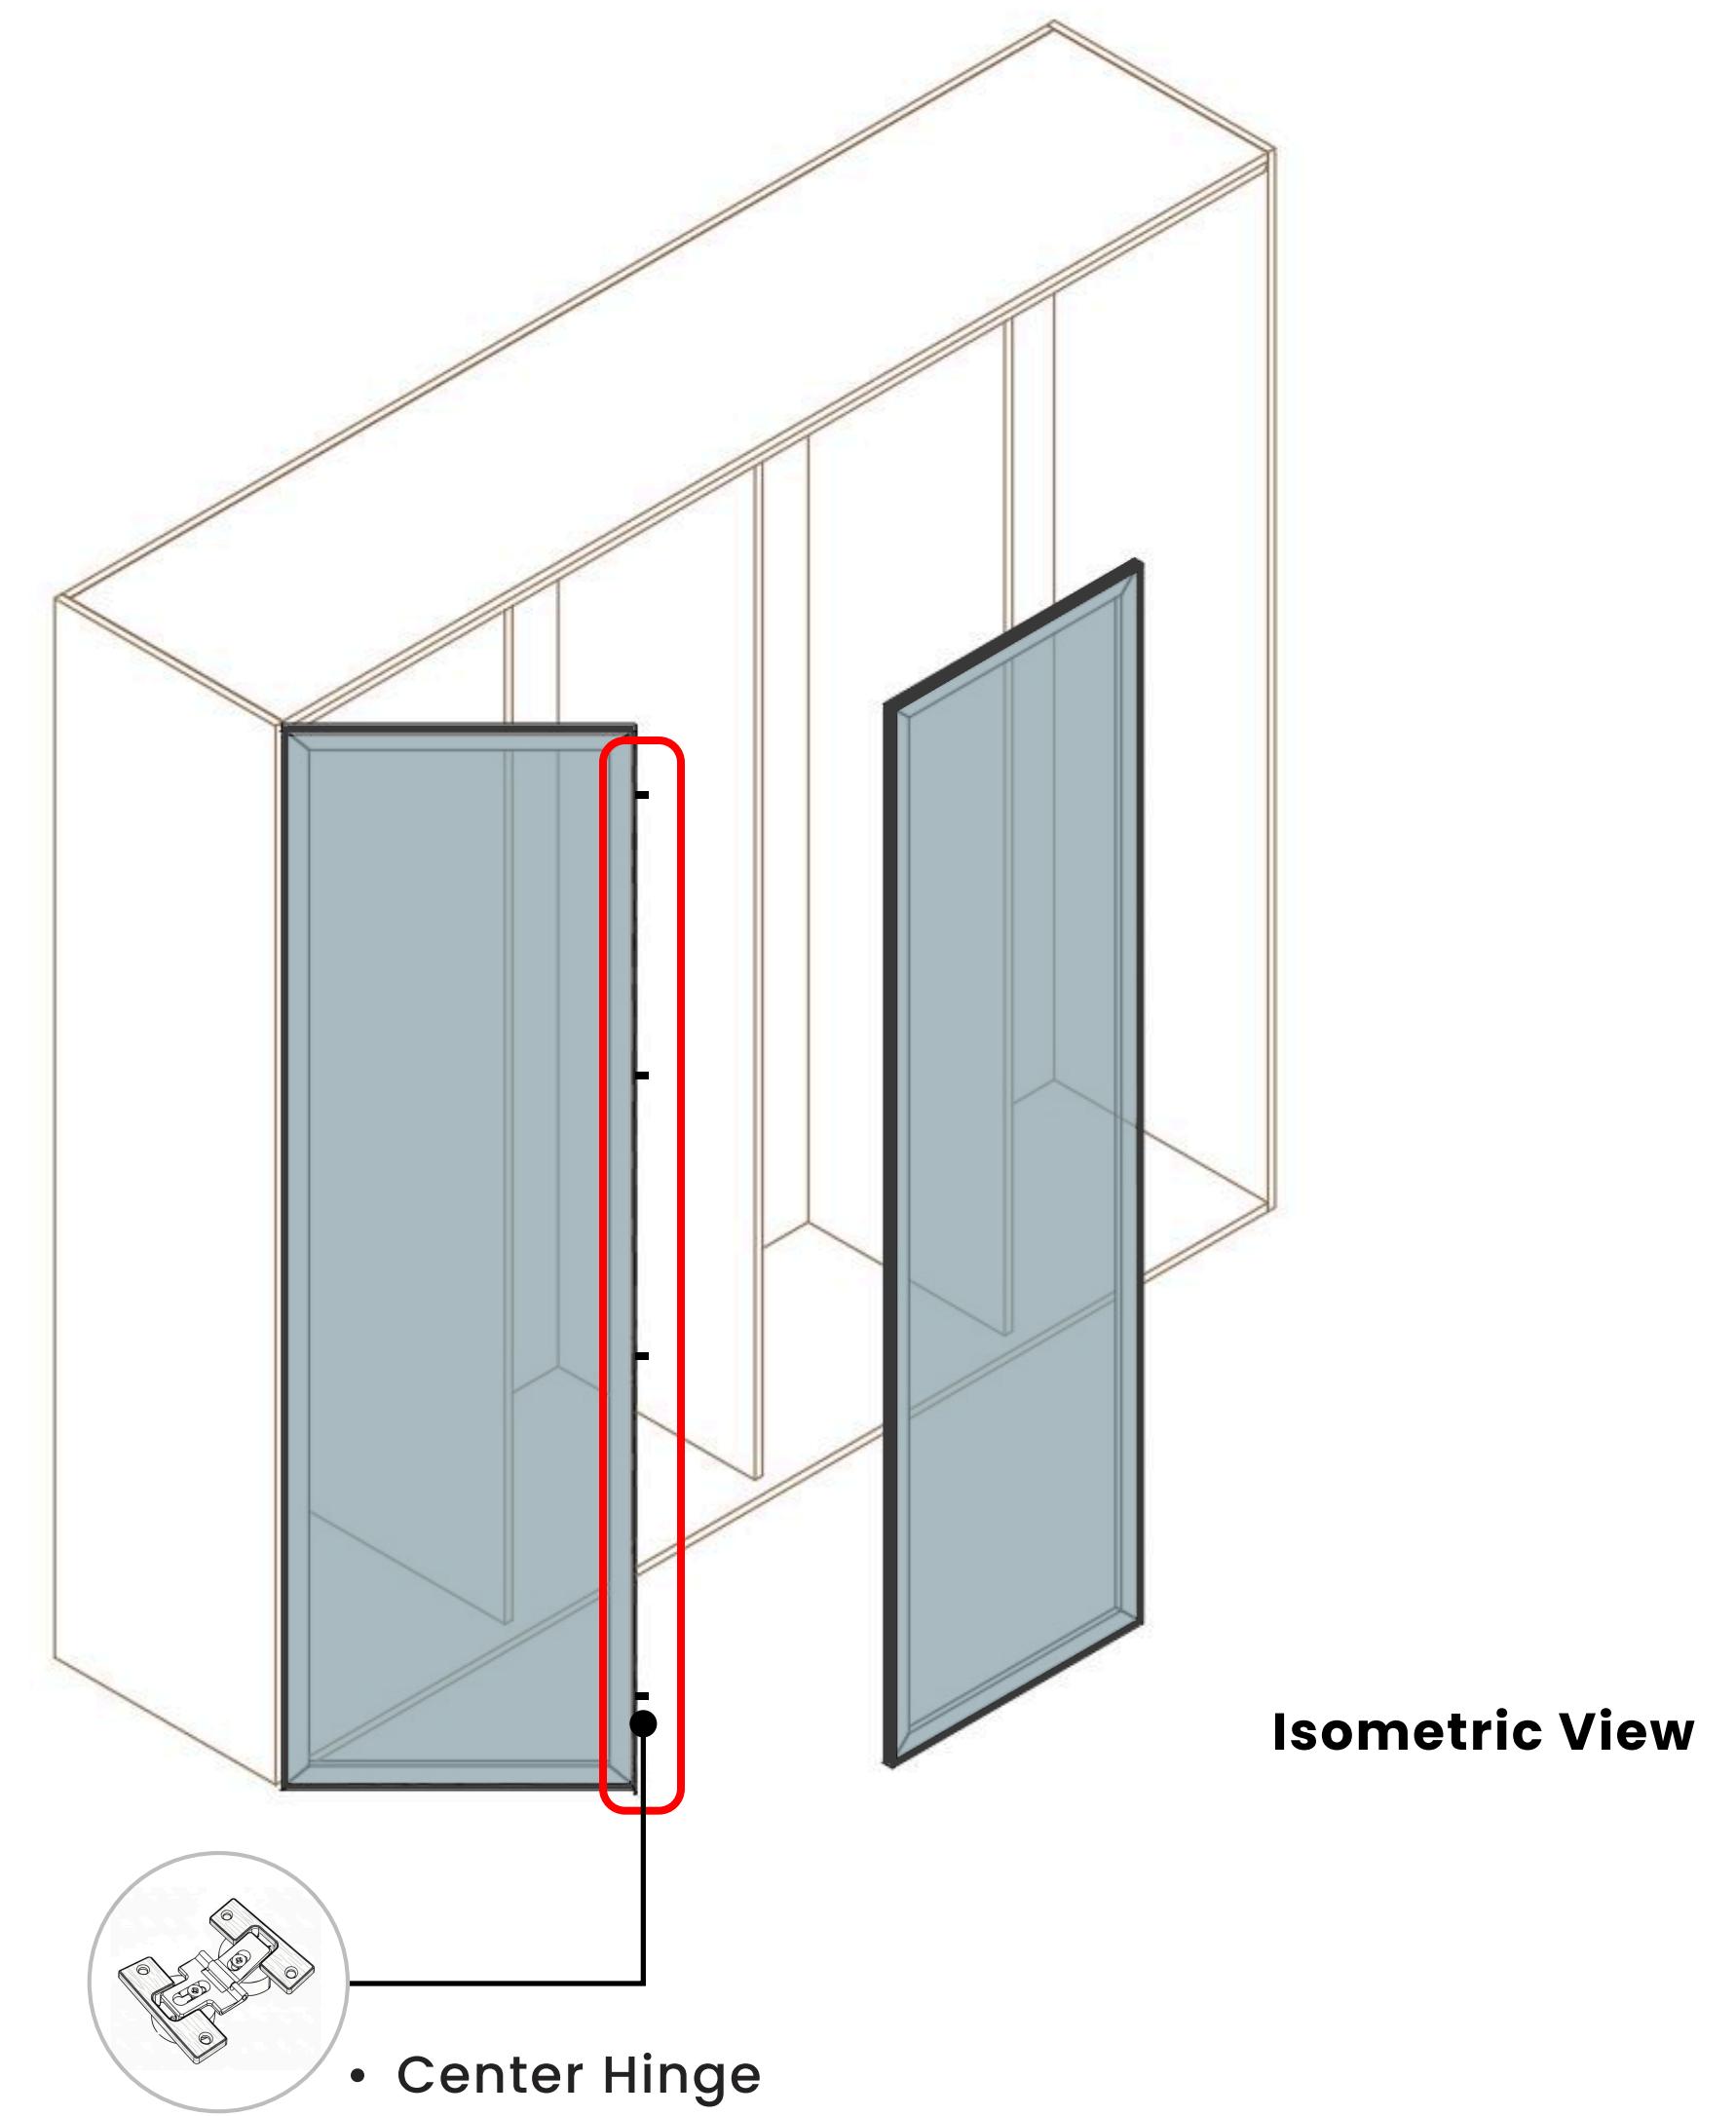

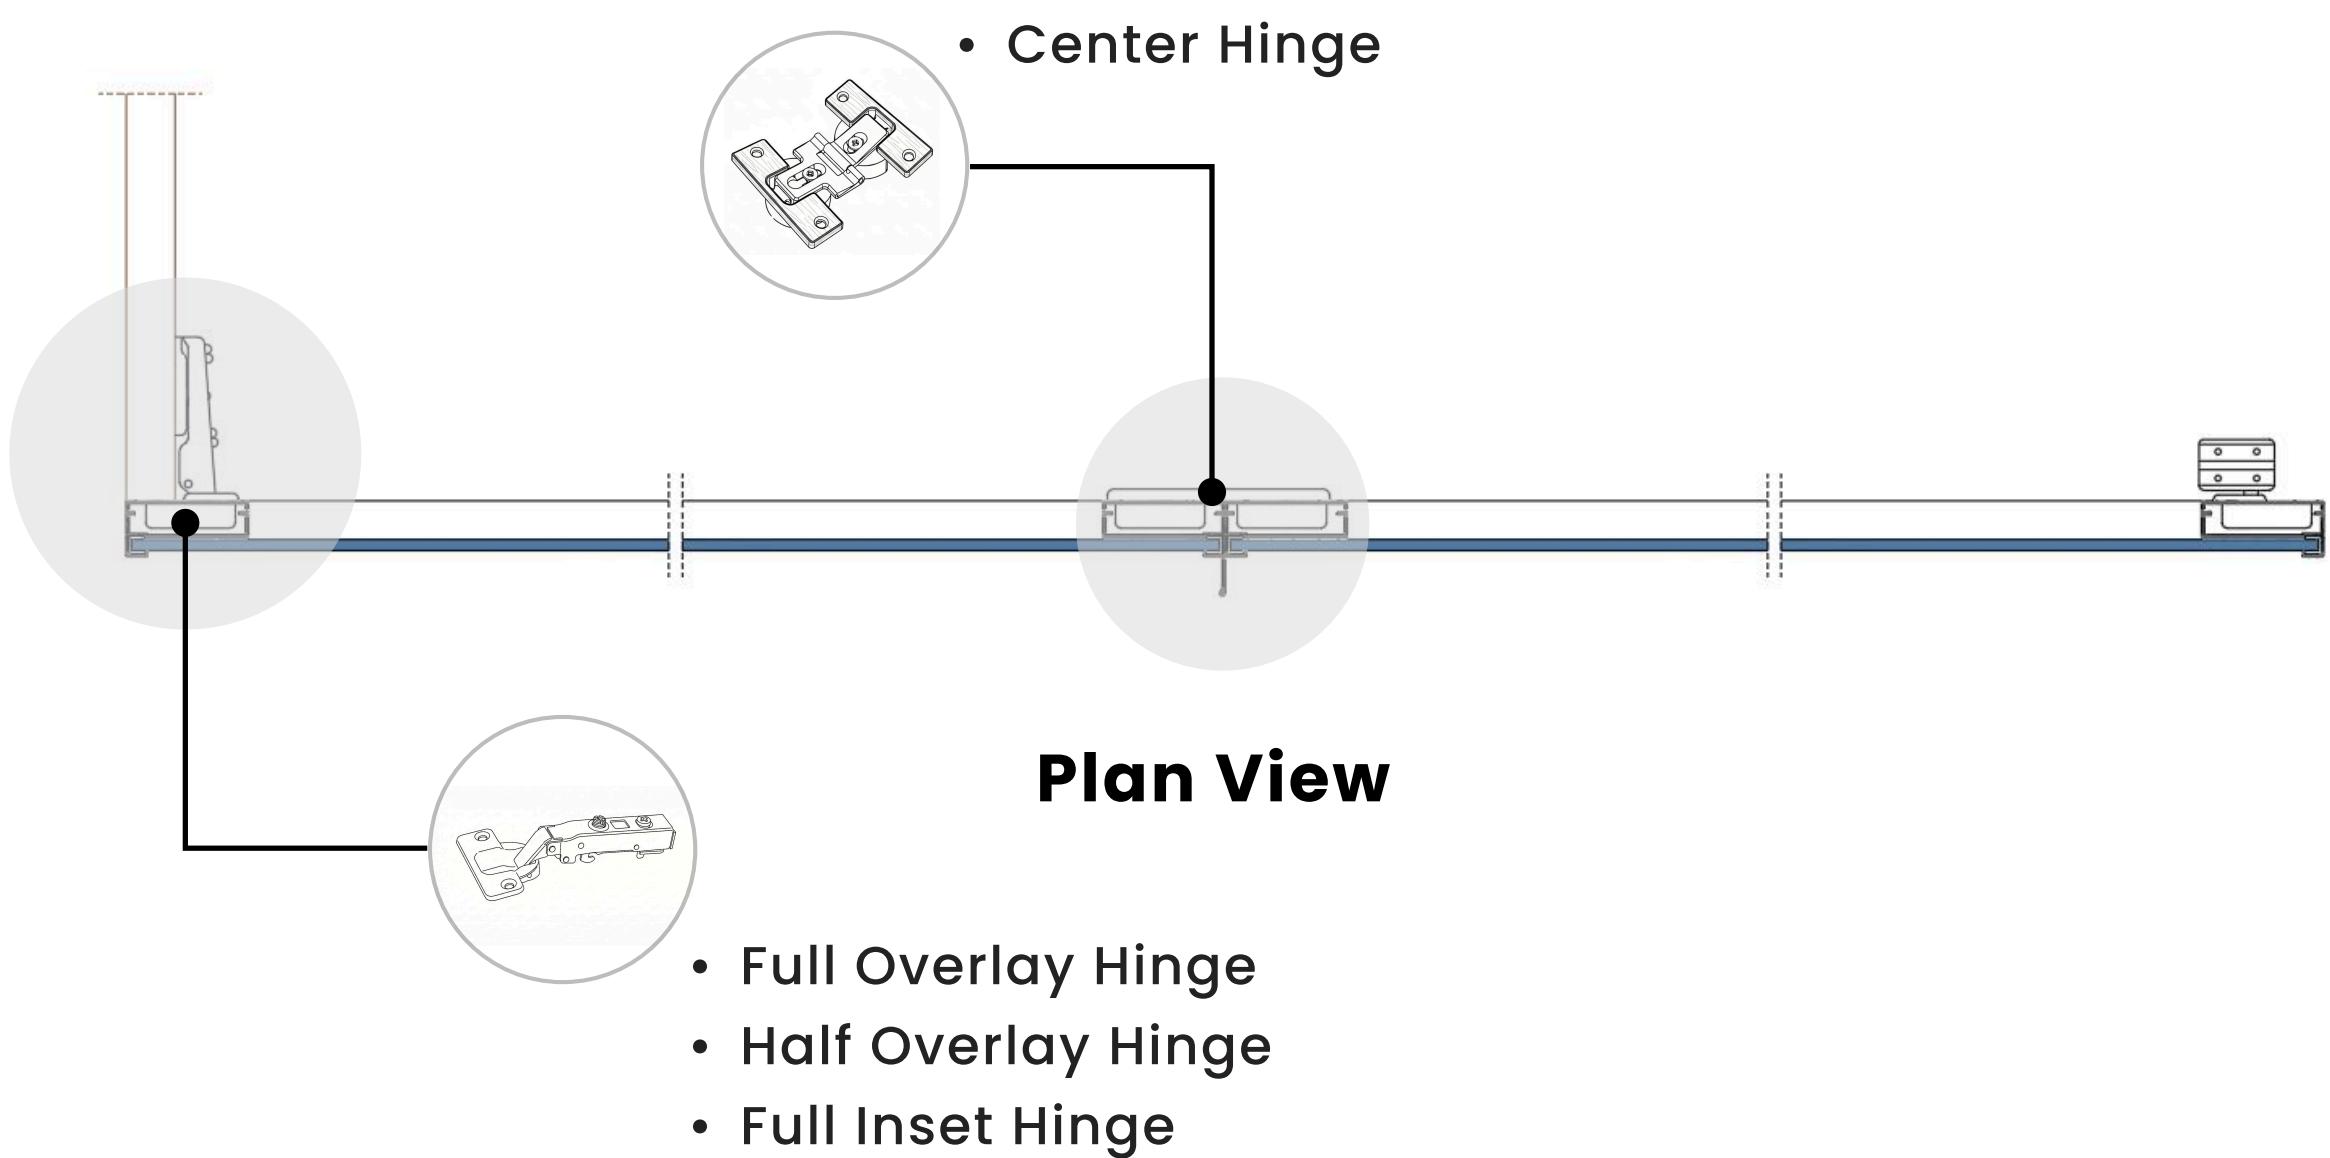

Side view

Side view shows all required dimensions for proper Roller Hinge Bracket installation.

HINGE FIXING

Center Hinge Positioning

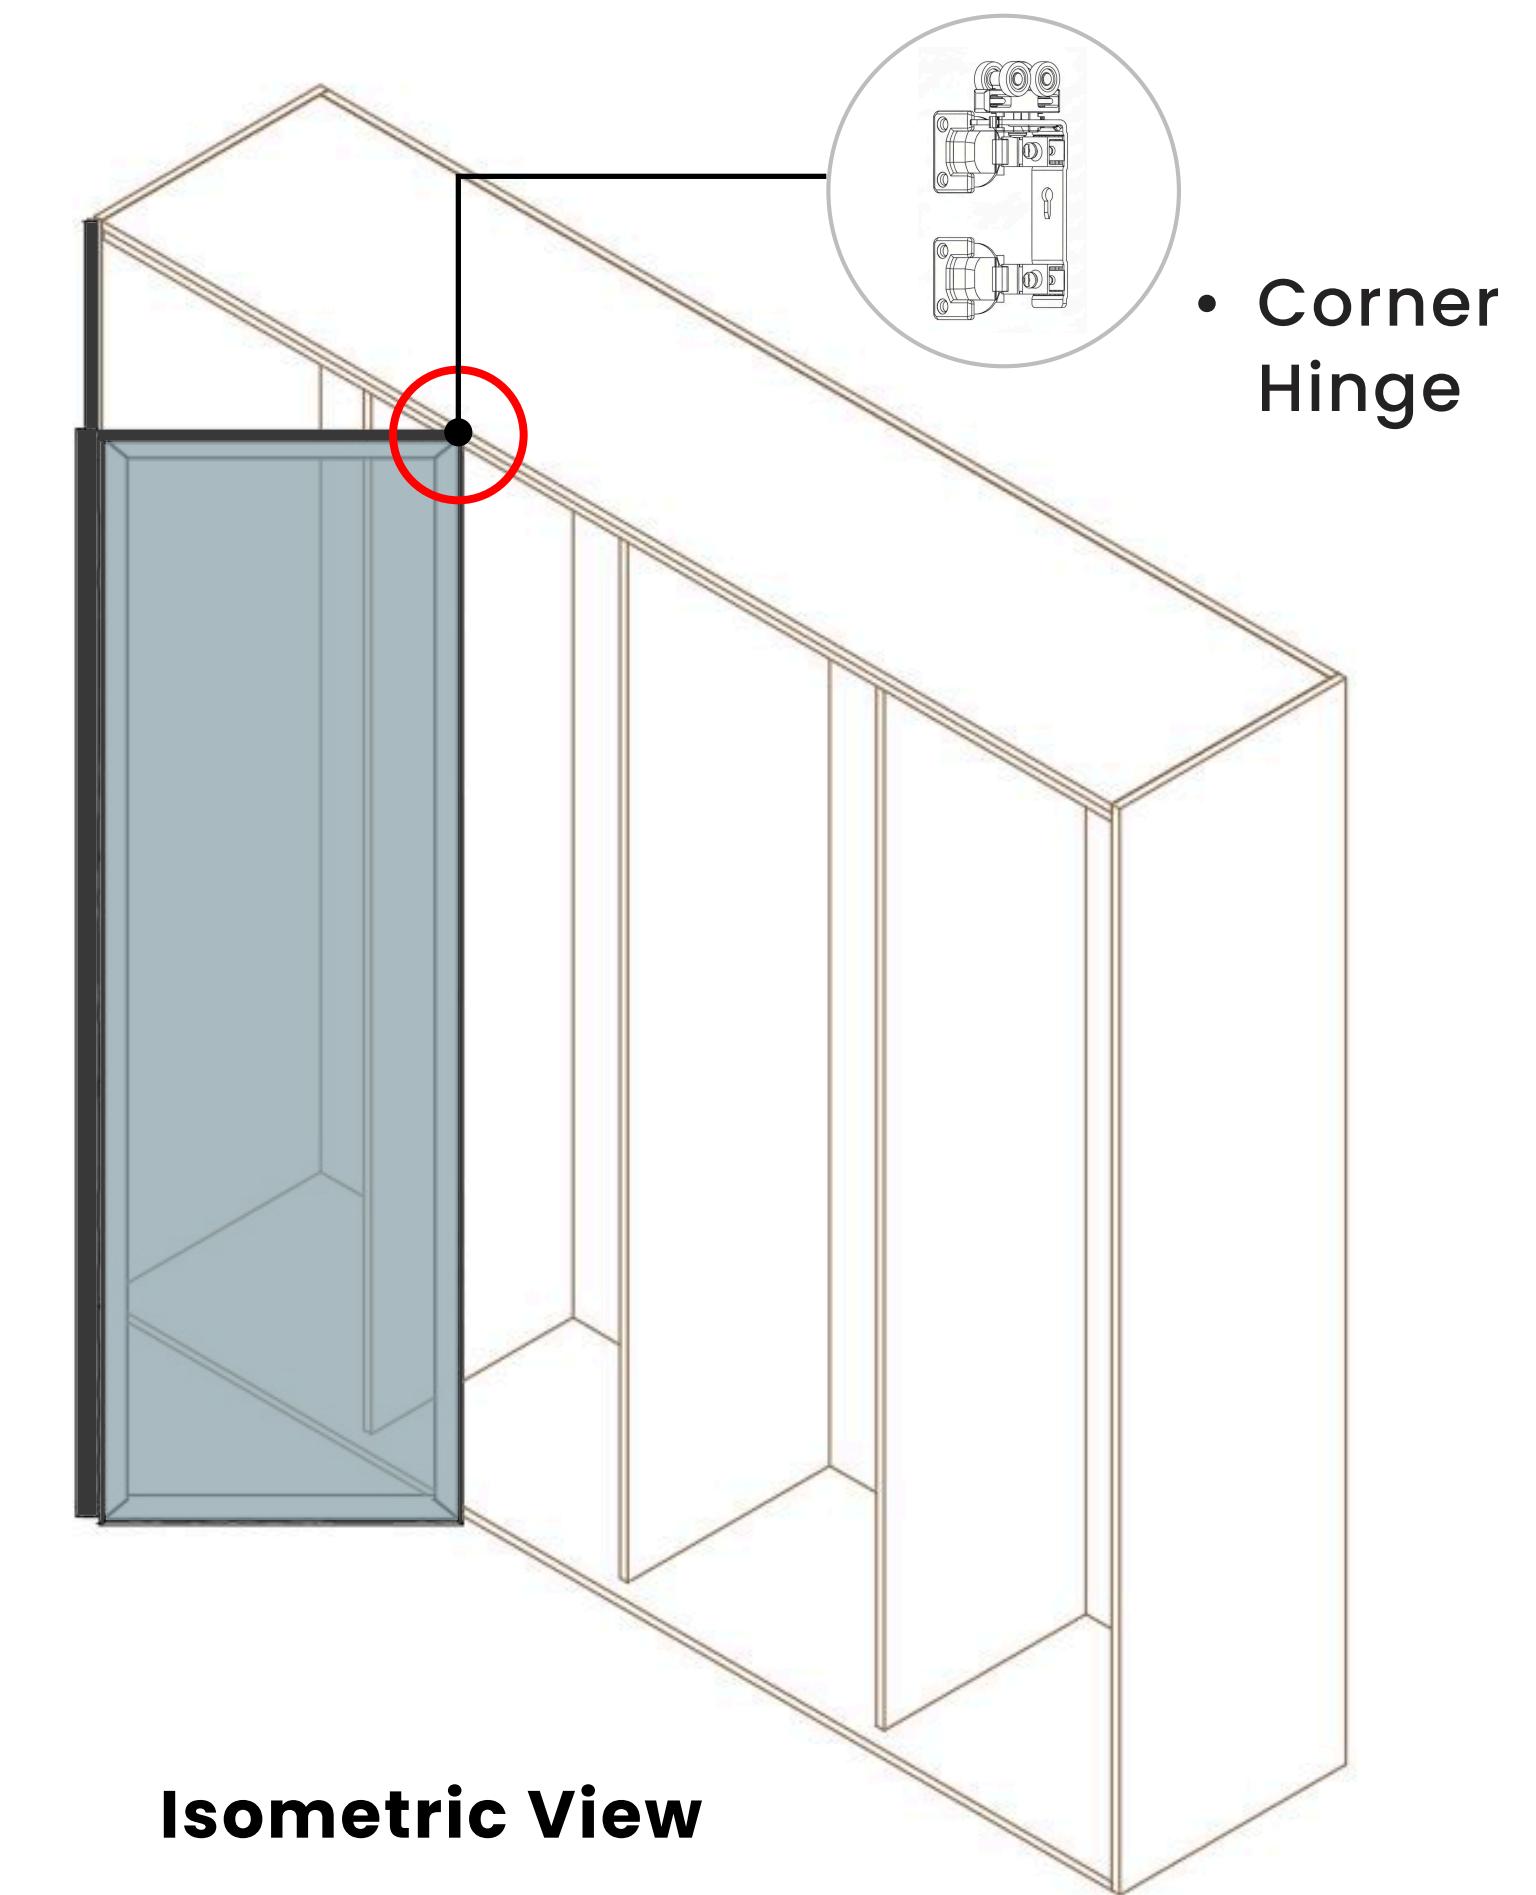

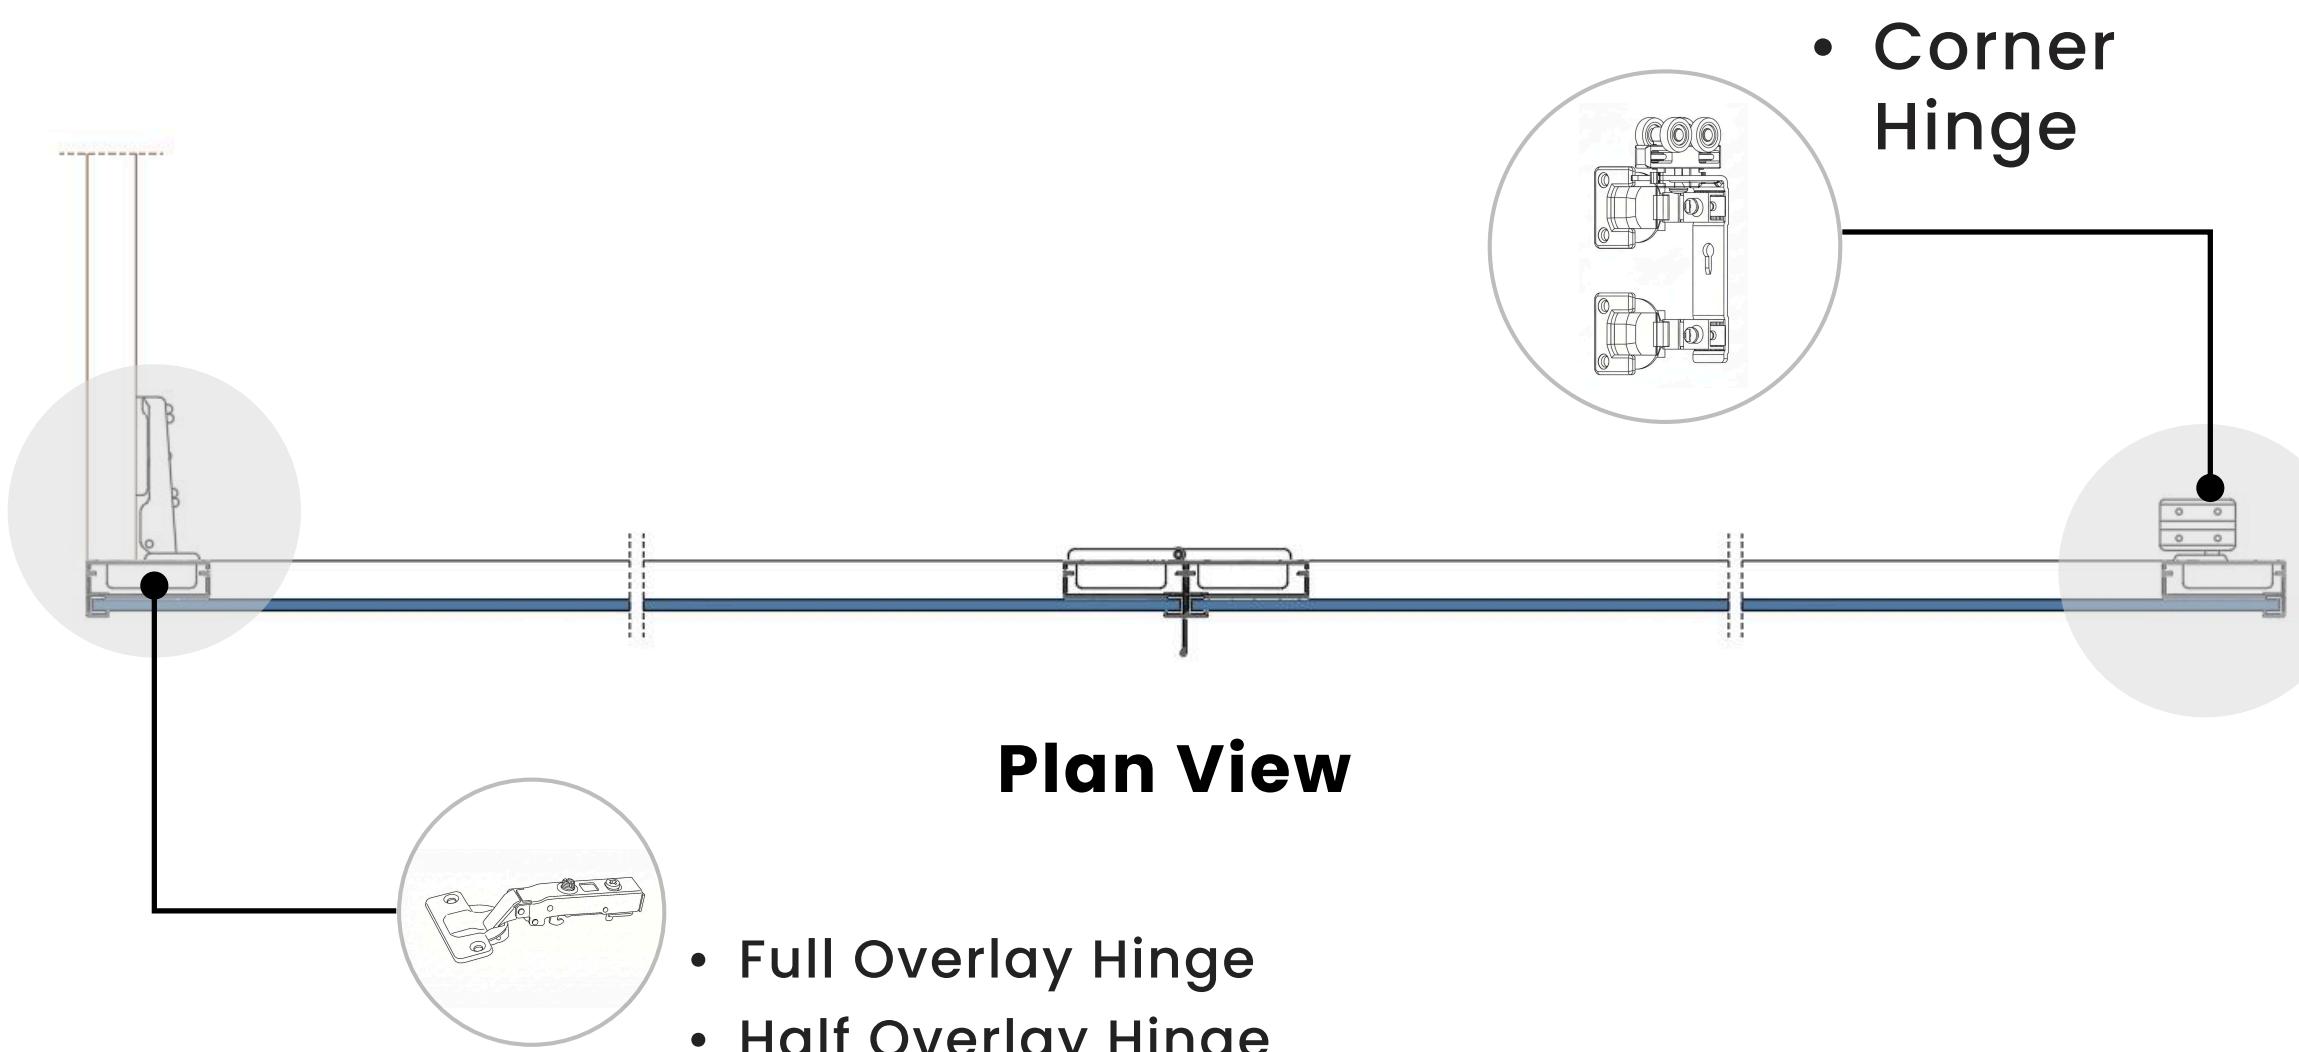

Secure the two shutter panels using the specified center hinges. These hinges provide the pivot point for the folding action, as detailed in both the plan and isometric views.

HINGE FIXING

Corner Hinge Positioning

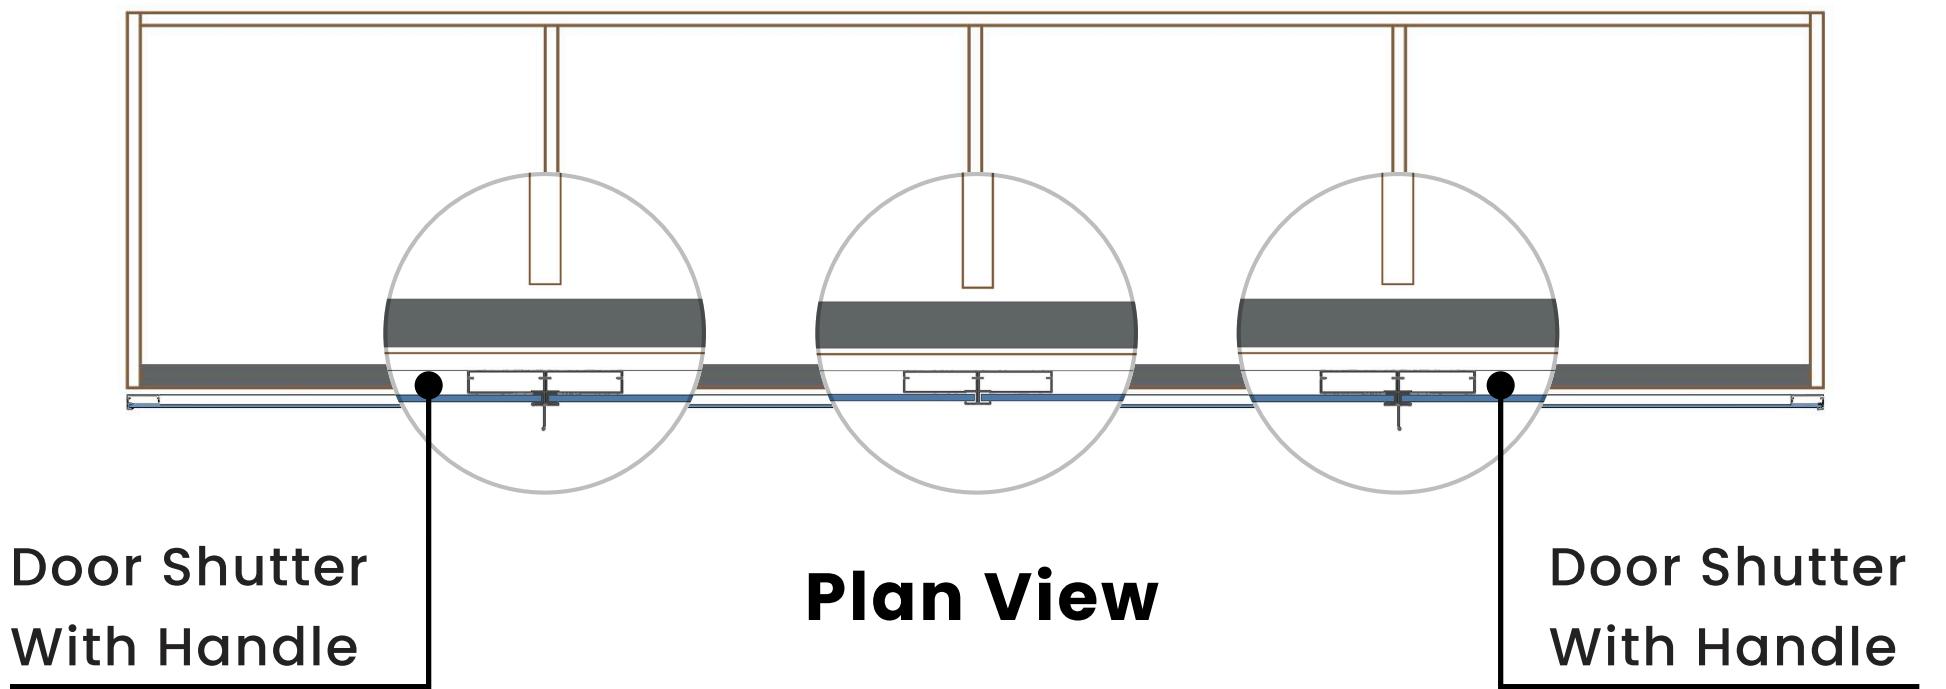

The plan and isometric views illustrate the connection between the door shutter and the upper roller carriage. Align the hinge arm with the roller mechanism plate and engage it until a secure connection is achieved.

HANDLE POSITIONING

Closed Plan & Elevation

Plan and elevation views showing the closet in the secure closed position, with detailed illustrations indicating the precise location of the integrated handle.

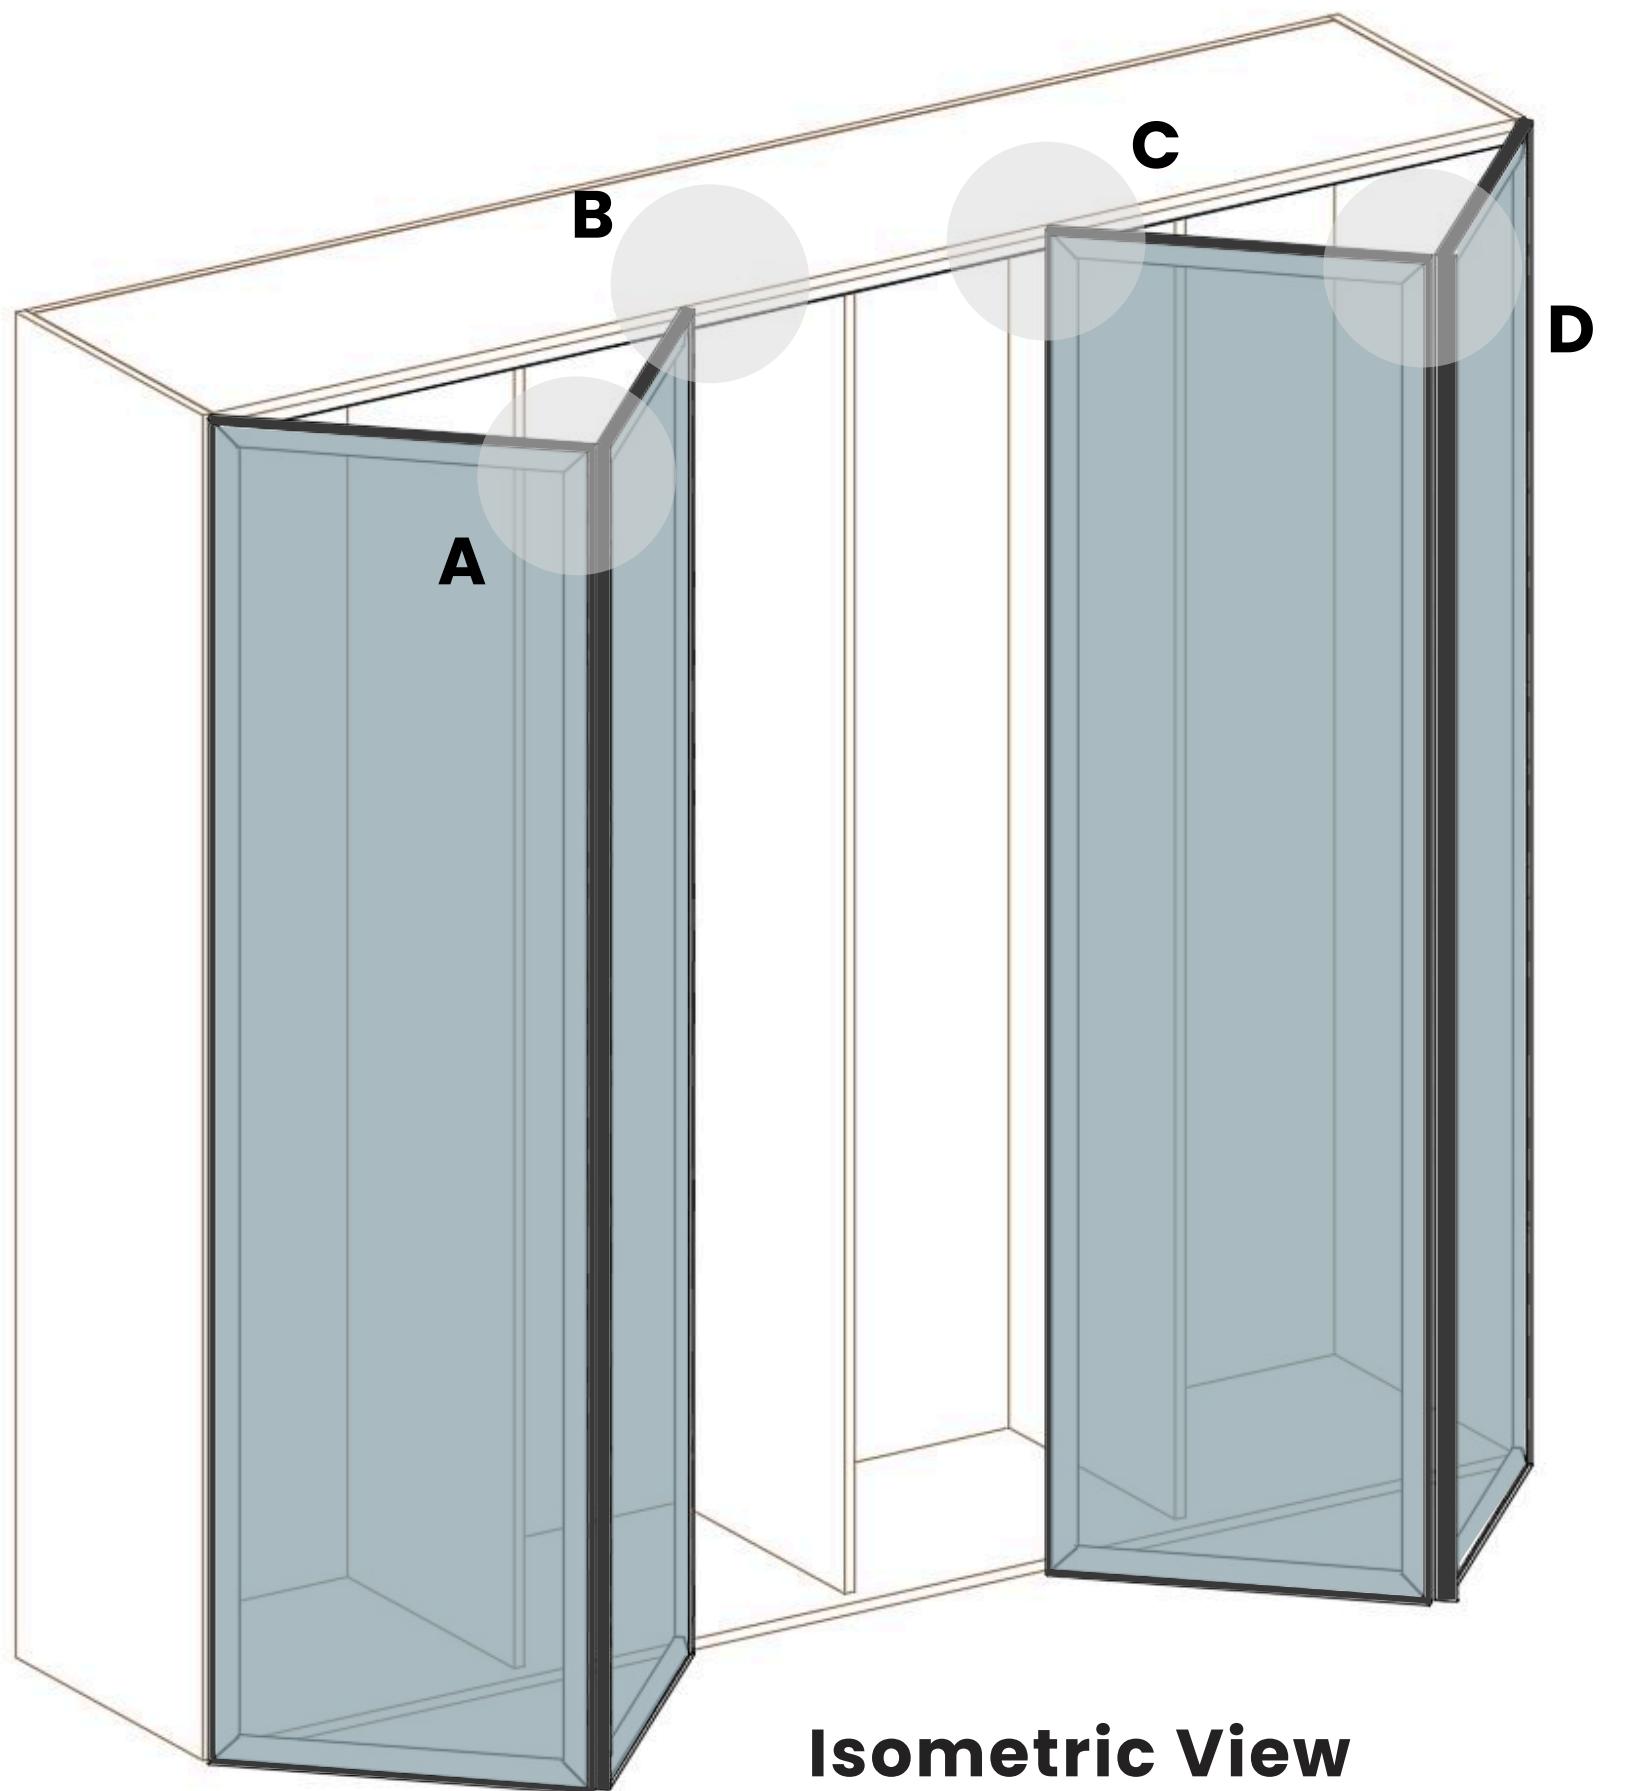

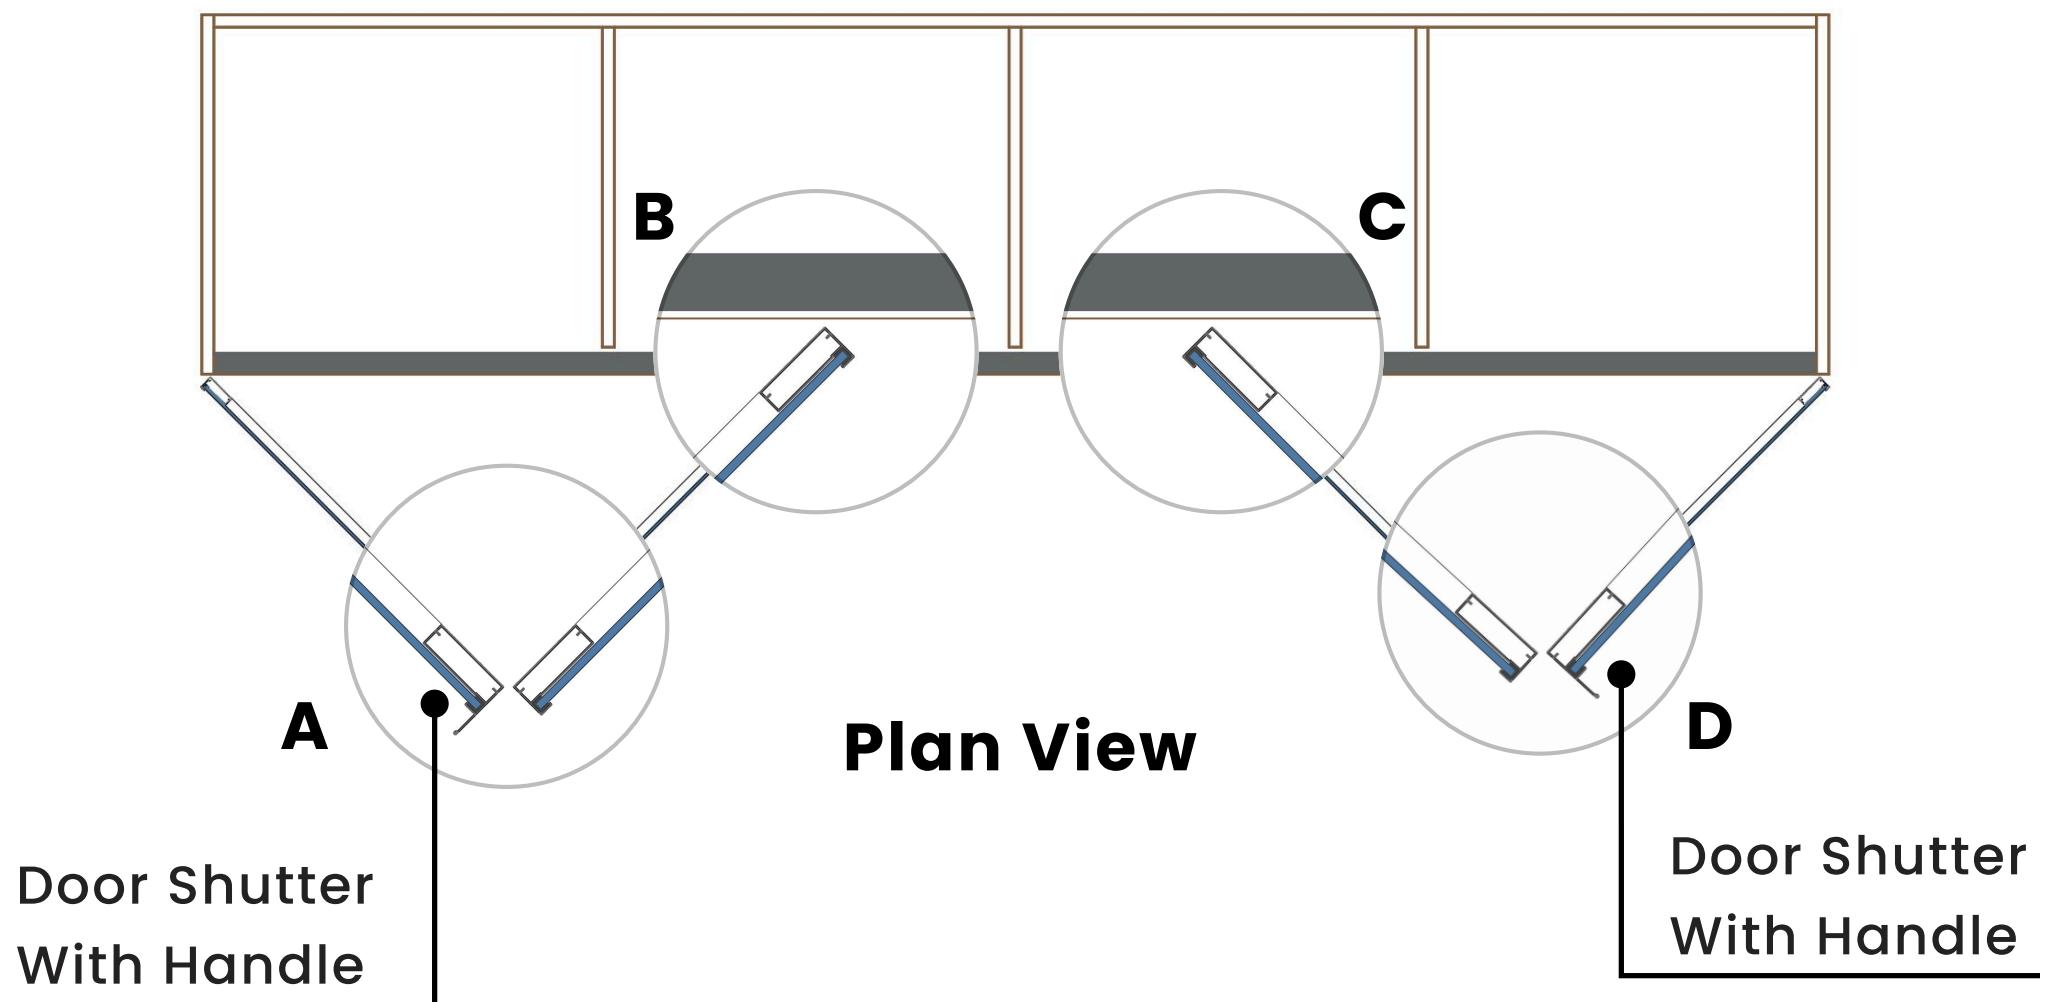

Elevation

HANDLE POSITIONING

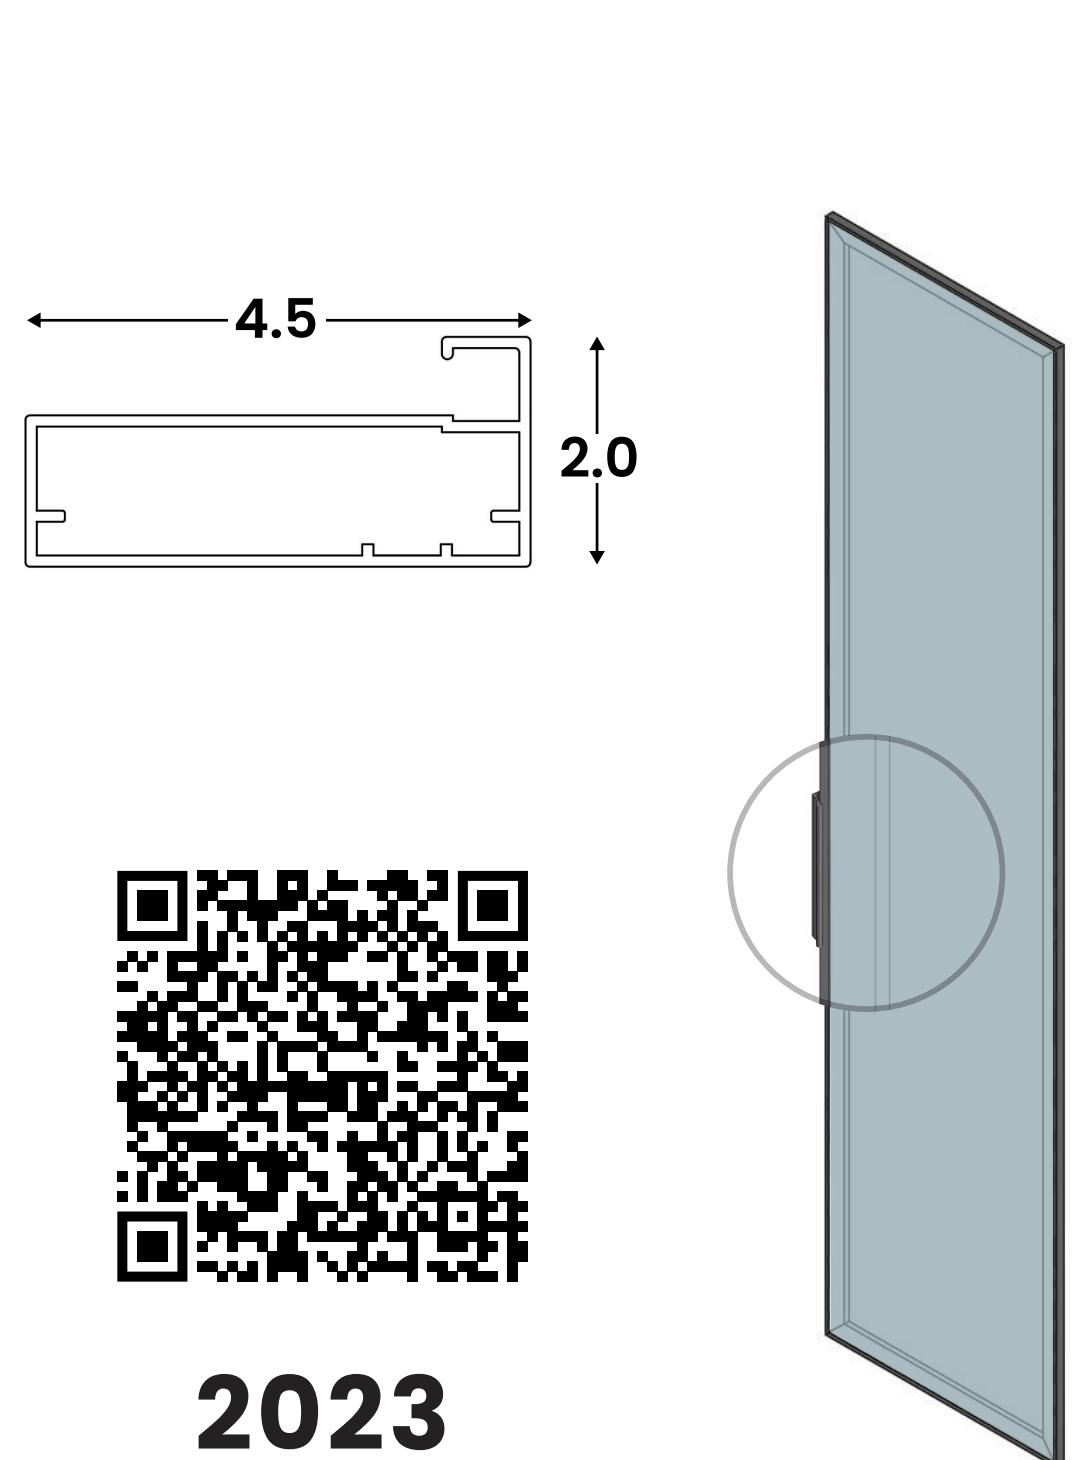

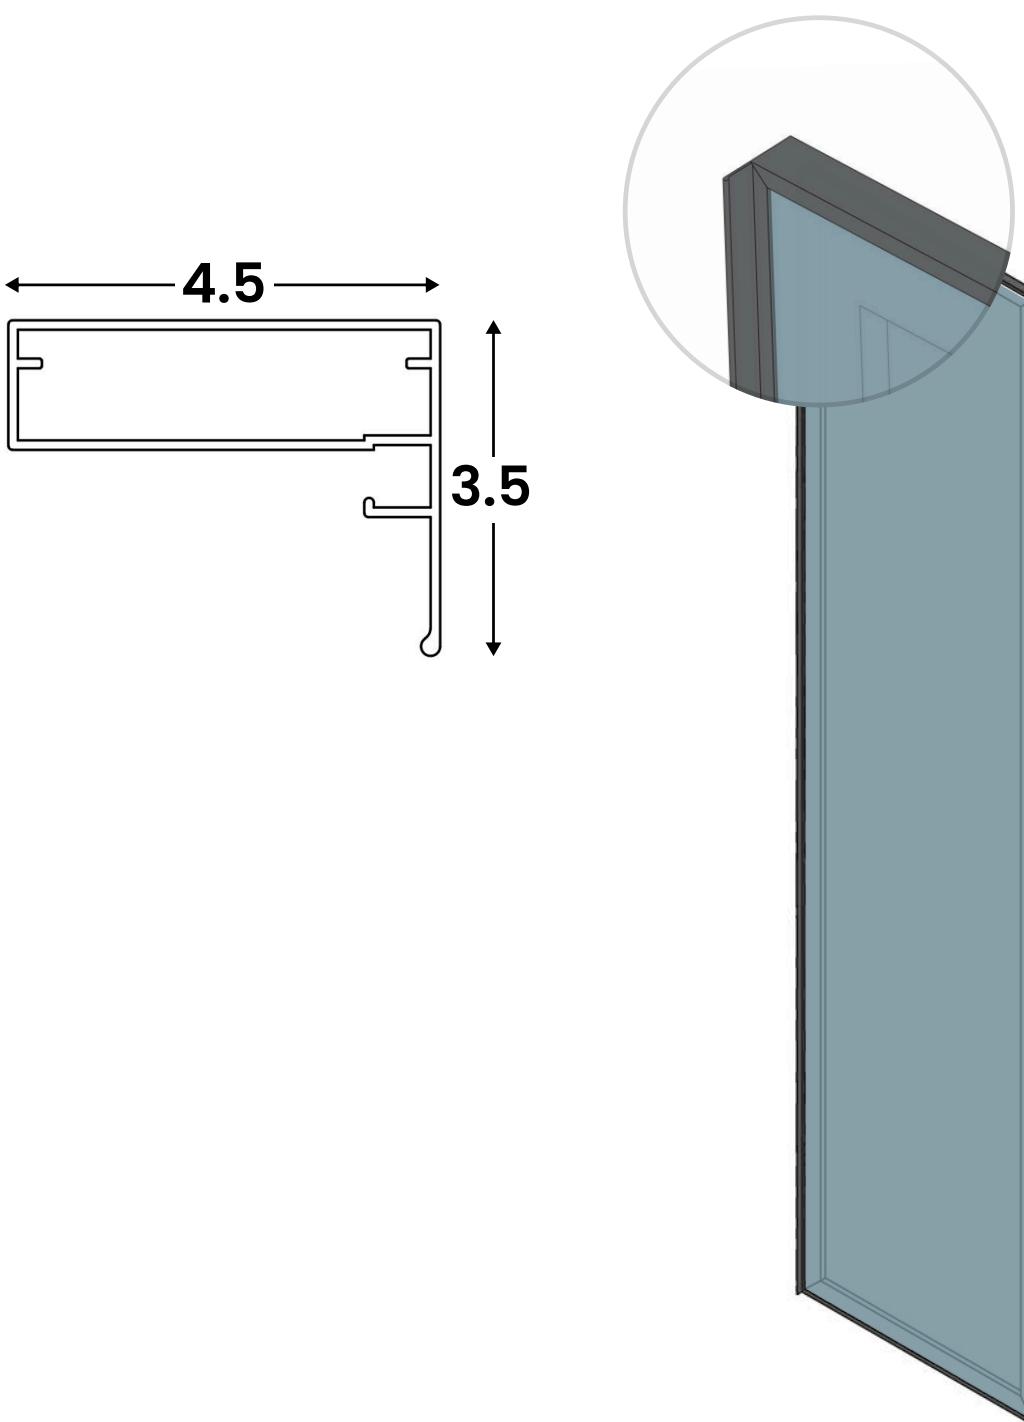

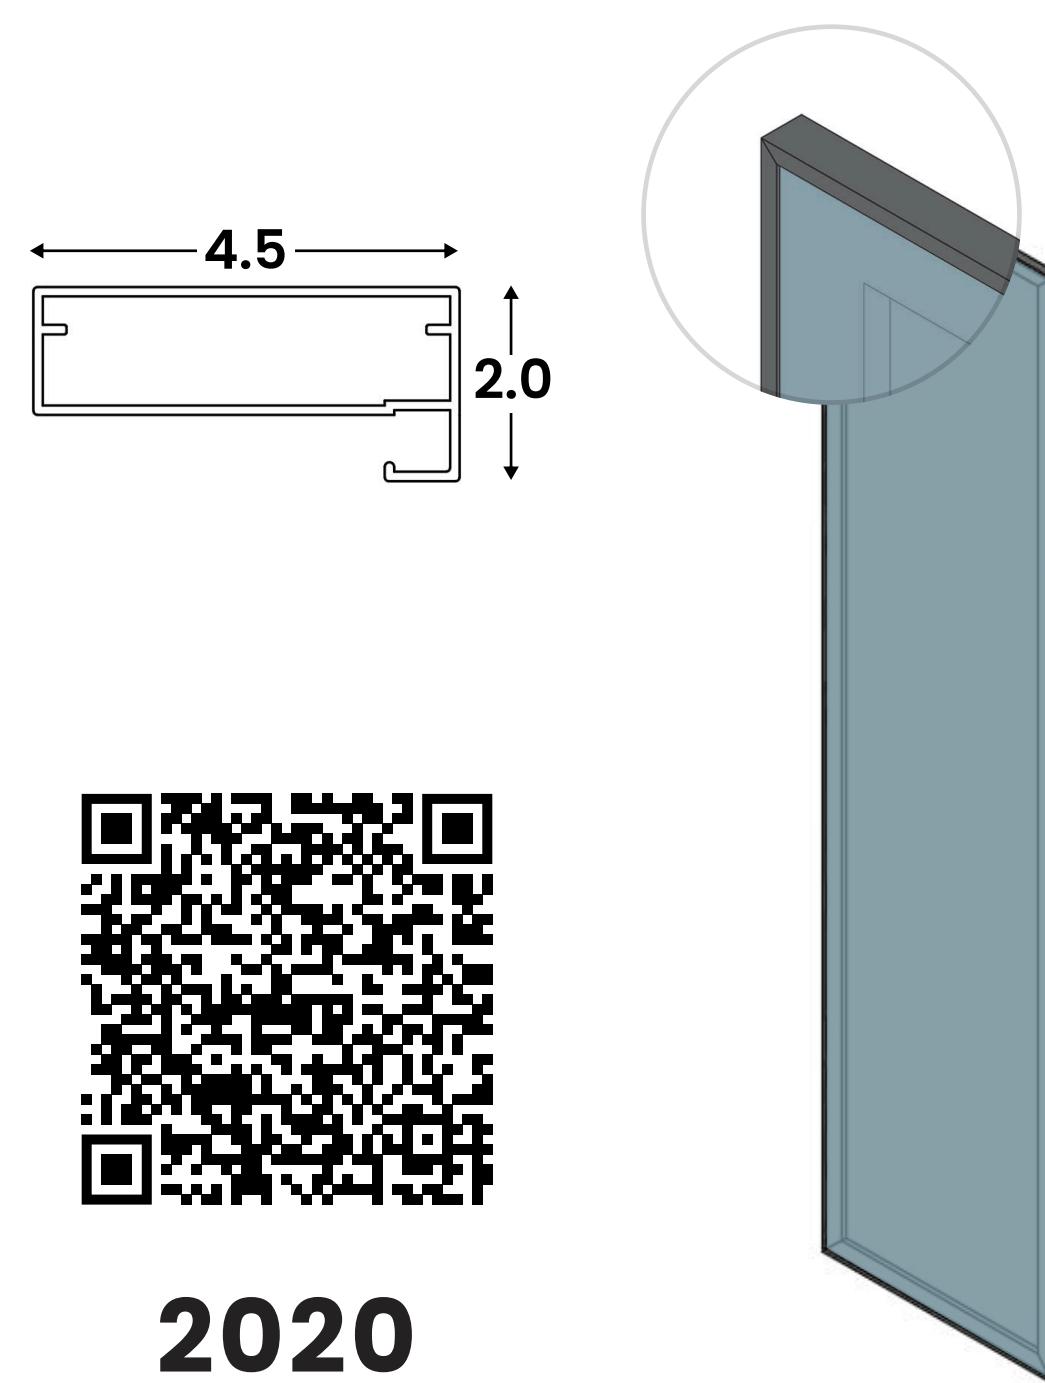

Open Plan & Isometric

Plan and isometric views showing the closet in the open position, with detailed illustrations indicating the precise location of the integrated handle.
